1. Use for intended purpose

As described in these operating instructions, the riveting tool may only be used for the purpose of setting blind rivets. **Observe the safety information!**

2. Safety information

- The riveting tool is to be used solely for the purpose of setting rivets.
- Never overload the tool; work within the specified working capacity.
- Do not use tool without material! The blind rivet could be flung from the device! Never turn the tool towards yourself or towards other persons.
- The spent mandrel container must remain mounted on the riveting tool during operation.
- The spent mandrel container must be emptied in good time; overfilling will cause the riveting tool to malfunction.
- Never use the riveting tool as a hammer.
- Regularly check the compressed air lines to ensure they are fitted correctly and airtight.
- The riveting tool should always be disconnected from the compressed air system when carrying out maintenance work and when the tool is not in use.
- Always wear protective goggles when working with the riveting tool. Personal protective equipment such as protective clothing, gloves, safety helmet, non-slip footwear, ear protection and fall arresting device is recommended.
- Do not exceed the permissible working pressure.
- When putting down the riveting tool, make sure that it cannot fall.
- Repairs must be carried out only by skilled personnel. In case of doubt, always send in the complete (not disassembled) riveting tool to the supplier or to GESIPA®.
- Dispose of the used hydraulic oil in accordance with valid environmental protection regulations.

3. Technical data

Tool type	PH 2000 / PH 2000-BT
Weight (kg)	2.1
Operating pressure (bar)	8
Hose connection (\varnothing mm) $\frac{1}{4}$ "	6
Spent mandrel container capacity	approx. 100 -200 (depending on size)
Air consumption (Nl/rivet)	2.8 - 3.6 litres per rivet (0.6 l compressed air)
Compressed air quality (filtered)	✓
Setting force (N) at 5 bar	10,000 N
Stroke (mm)	22

Tool type	PH 2000 / PH 2000-BT
Hydraulic oil, Renolin Eterna 32 (approx. ml)	30
Noise emission L _{pa} (dB)	83 (measurement uncertainty K=3dB)
Vibration (m/g ²)	<2.5 (measurement uncertainty K=1.5 m/s ²)

5. Working capacity

5.1 PH 2000

For blind rivets up to Ø 5.0 mm in all materials, up to Ø 6.0 mm in aluminium, and blind rivets from Ø 2.4 mm to 3.2 mm with small jaw assembly (item no: 143 4234) MEGA GRIP® blind rivets up to Ø 6.4 mm in all materials, with conversion kit required for Ø 6.4 mm (Part No. 145 6762).

Also for plastic blind rivets Ø 4 mm, 5 mm and 6 mm.

5.2 PH 2000-BT

For BULB-TITE® blind rivets up to Ø 7.7 mm in all materials.

6. Nosepiece assignment

Rivet Ø	Rivet material	PH 2000	Part No.	PH 2000-BT	Part No.

* Small jaw assembly required(Part No. 143 4234)

** Conversion kit required (Part No. 145 6762)

7. Start-up

Before starting the riveting tool, read and observe the operating instructions and safety information and keep in a safe place. Have technical personnel connect the compressed air supply to the riveting tool.

7.1 Selecting and changing the nosepiece

Caution: 

Always fit the nosepiece corresponding to the size of the blind rivet (refer to table in Section 6).

To change the nosepiece:

- Disconnect the tool from the compressed air supply.
- Unscrew nosepiece from steel head sleeve.
- Screw in corresponding nosepiece and tighten.

7.2 To set a blind rivet

- Connect the riveting tool to the compressed air supply.
- Insert the blind rivet in the nosepiece and fit as far as it will go in the hole in the material to be joined.
- Press trigger until the mandrel breaks off.
- Release trigger.
- The spent mandrel is automatically conveyed into the spent mandrel container.

8. Sucking in and holding a blind rivet

Special function VAS

- The setting screw marked with "VAS" is reached with the supplied ball end screwdriver.
- Turning the screw 1 to max. 1.5 turns clockwise creates the suction air that holds the blind rivet in the nosepiece.
- Only turn the setting screw so that the suction air holds the vertical blind rivet against the nosepiece.
- Turning the screw anticlockwise shuts off the suction air.

9. Emptying the spent mandrels from the container

Caution: 

The spent mandrel container must be emptied regularly; overfilling will cause the riveting tool to malfunction.

- Disconnect the tool from the compressed air supply.
- Open the spent mandrel container by turning the outer casing, empty spent mandrels into suitable container and dispose of in corresponding recycling system.

10. Maintenance and care

The complete jaw mechanism must be maintained regularly.

10.1 To clean or change the jaws

- Disconnect the tool from the compressed air supply.
- Unscrew steel head sleeve (No. 2) and clean inside if necessary.
- Use 17 mm and 14 mm open-ended spanners to release jaw housing (No. 3) from lock activator (No. 16), clean or replace if worn.
- Remove jaws (No. 4), clean and oil sliding surfaces; replace if worn.
- Check jaw pusher (No. 5) for wear; replace if necessary.
- Reassemble the jaw mechanism in reverse order; screw together No. 3 & 16; tighten No. 2.

10.2 To top up oil

- Unscrew steel head sleeve (No. 2) and jaw housing (No. 3).
- With the trigger button (No. 30) pressed, disconnect the riveting tool from the compressed air supply (air piston in upper end position).
- Undo oil refill screw plug (No. 8) and push lock activator (No. 16) into the rear end position by hand.
- With supplied refill bottle – fit filler piece deep into the tool head – top up oil free of bubbles.
- Moderately tighten the refill screw plug with seal.
- Connect the riveting tool to the compressed air supply.
- Drain off overfilled oil by releasing the refill screw plug (No. 8) and then moderately tighten again.
- Fit jaw housing (No. 3) and, with the trigger button (No. 30) pressed, fit and tighten steel head sleeve (No. 2).

10.3 Storage

- Store the riveting tool in a dry place where there is no danger of frost.

11. Repairs

Repairs under warranty are carried out by the manufacturer. Repairs outside the warranty period should only be carried out by skilled technical personnel. Failure to observe the assembly and setting procedures and operation by non-skilled personnel may result in serious damage to the riveting tool. In case of doubt, always send in the device to the manufacturer.

Regular maintenance will extend the service life of your high-quality GESIPA® tools and they should be serviced at least every 2 years by an authorised workshop or by GESIPA® Service. For tools that are subject to intensive use, we recommend servicing ahead of schedule.

12. Troubleshooting

12.1 Blind rivet is not set

Cause	Remedy
Jaws (No. 4) dirty	Clean and oil sliding surfaces (see 10.1)
Jaws (No. 4) worn	Replace (see 10.1)
Insufficient compressed air	See operating pressure (see 3.)

12.2 Spent mandrel is not conveyed automatically into the container

Cause	Remedy
Wrong nosepiece used (No. 1)	Replace according to table (see 6.)
Nosepiece (No. 1) worn	Replace
Spent mandrel jammed in jaw housing (No. 3)	Clean or replace jaw mechanism (see 10.1)
Spent mandrel container full	Empty (see 9.)
Wrong jaw pusher (No. 5) used	Replace according to table (see 6.) and refer to Section 10.1

13. Warranty

The applicable terms and conditions of warranty shall apply and can be viewed under following link: www.gesipa.com/agb

14. CE Declaration of conformity

We hereby declare that the design and construction of the tool named below, as well as the version that we have put on the market, complies with applicable fundamental health and safety requirements stipulated in EU directives. Tool modifications made without our authorisation shall render this declaration void. The safety information in the product documentation provided must be observed. This document must be retained.
